

We are proud to announce the founding of our **Special Flow Projects department!** This team of experienced engineers, chemical engineers, and chemists are dedicated to developing large scale reactors, capable of kilo to 50 kilos/day production and beyond, and solutions to solve your specific problem.

Do you have special needs to do your chemistry, but can't find a ready solution on the market? Want to scale up your lab processes? Or just want a device to mimic your plant scale reactor?

With our years of experience in flow chemistry equipment R&D we will live up to your expectations. Do not waste more of your time and energy, come to the experts to solve your problems!

H-Cube Maxi™ - Large scale hydrogenation reactor
